

TOTAL CONTROL

PORTABLE SOFTWARE CONTROLLER

HIGH-QUALITY SOFTWARE PERFORMANCE. TOTAL CONTROL is a powerful control surface for performing and producing with DJ software. The time-tested layout works just like two decks and a mixer so whether you're a seasoned professional or just honing your skills, TOTAL CONTROL is easy to learn and capable of advanced technique. It's portable so you can grab TOTAL CONTROL and your laptop and go to wherever the gig is.

FAMILIAR LAYOUT

TOTAL CONTROL has two deck controller sections with large jog wheels and transports controls so whether you're used to a CD player, turntables, or any other traditional DJ hardware, you'll find getting around easy. The center of TOTAL CONTROL's surface is its mixer section with a smooth crossfader, line faders, deck EQs, and more advanced controls for looping and effects.

TRAKTOR ENABLED, MIDI COMPLIANT

TOTAL CONTROL comes with Native Instruments Traktor LE software, based on Traktor Pro, and it is pre-mapped to work with both so you can just plug it in and start making magic. Because it's MIDI-compliant, you can use TOTAL CONTROL with virtually all DJ and other music software. TOTAL CONTROL features lighted controls that indicate status in the software for less time looking at the computer and more time at the party.

EASY USB CONNECTION

TOTAL CONTROL connects to your Mac or PC as a class-compliant USB device so it requires no software drivers to work, and USB powers it so you won't need an external supply.
